

This is your chance to finally be heard and become famous in the process!

WHO WE ARE SEEKING...

You don't need to be good looking, or an actor. We just need engineers who can honestly contribute to an engineering analysis of the paranormal mystery that has faced mankind for over 2,000 years.

We have advanced very little as a civilization towards answering the ultimate question, is there life after death? So called "Ghost Hunters" are doing the same things that ghost hunters were doing over 30 years ago. Nothing has changed. Sure, the equipment has improved, but it's always the same equipment Cameras and Audio recorders. It's time to change everything!.

We are a group of Engineers who have been sickened by the collection of ghost hunters on TV and have decided to do something about it! We will create investigations that actually produce results. We will build equipment and conduct paranormal investigations like nobody before in History.

GHOSTEngineers *The Discovery of the Century*

All filming and engineering meetings will occur on the weekends.

Some of the questions we need answered:

1. How can human voices be recorded on tape without the use of human vocal cords?
2. What invisible force can drain the power from DC batteries?
3. What invisible force or object can break a laser beam? We are talking about the laser beams used in alarm systems that trigger an alarm when someone walks through the beam.

Feel free to email or mail your solutions or comments to:

Ana Frias

P.O. Box 501167

Malabar, FL 32950

Team@GhostEngineers

Your suggested solutions or analysis may be featured in the TV series (along with your name.) We will contact your first before including it in an episode.

GHOSTEngineers *The Discovery of the Century*

Seeking Engineers for new Paranormal TV Series.

www.GhostEngineers.com

series is not intended to “disprove” ghosts, but rather to take the study beyond photos and tape recorders and start to analyze what is happening from a scientific perspective. For example, why do laser beams break by invisible forces inside of a “haunted” hospital? The series will show team meetings of our engineers as they try to figure out the answer to the paranormal puzzle.

YOUR CHANCE TO BECOME FAMOUS!!!

A new T.V. series has been picked up by a production company and needs talented engineers from the Space Coast Area. If you've ever wanted to be on TV, now is your chance. We are seeking engineers with experience in any of these areas:

- Electric & EMF fields
- Optics & Photographic Analysis
- Physics, or Neutrinos
- Thermodynamics
- Laser Technology
- Paranormal Experience
- Imaging, X-Rays

This series seeks to understand the paranormal by building devices and examining the physics involved. The

If you are interested in being considered for this series, please submit your resume and short letter of what you can contribute to the series. Email them to:

team@GhostEngineers.com

You can also mail in your information to:

Ana Frias
P.O. Box 501167
Malabar, FL 32950

STOP THESE FOOLS!!

This is the current face of paranormal research. A group of uneducated plumbers running around with cameras with no understanding of basic Physics. On national T.V. the leader of this group (a plumber) made the statement that ghosts are made of “pure energy”. Last time we checked, this is impossible and simply non-sense.

If you are tired of these uneducated plumbers getting all the glory, then send us your information. Individual theories are welcomed as well. All credit for any theoretical solutions or engineering devices will be given completely to the engineer or scientist who created them.

Turn over on back for list of problems to be solved.
